PREFACE

This is the seventeenth edition of the *California Statistical Abstract,* a compilation of data on social, political, economic and physical aspects of the State. The 1976 *Abstract* has been designed as an update to the 1970 historical volume and the 1971, 1972, 1973 and 1974 *Abstracts,* and as such shows only data for later years, or data which have been revised since the previous edition. Future editions of the *California Statistical Abstract* will follow this format, presenting only updating material. Each table in this edition indicates where comparable data may be found in the 1974 *Abstract.*

The volume is a cooperative effort of various state agencies and several private organizations, noted in the Appendix. Material is edited by the California Department of Finance, Financial Research Section. The Department of Finance welcomes comments on the *Abstract* and ways in which it may be developed into an even more useful compilation of data on the State.

INTRODUCTION

California covers 158,693 square miles between the 32nd and 42nd parallels north latitude on the Pacific Coast. The State is well known for its temperate climate which has attracted millions of people to the coastal cities. Los Angeles-Long Beach ranks as the second largest metropolitan area in the United States, and San Francisco-Oakland as the sixth. California includes Mount Whitney, the highest peak in the contiguous United States, at 14,495 feet above sea level, and Death Valley, 282 feet below sea level, the lowest point in the Western Hemisphere. The average July maximum temperature ranges from 64 degrees in San Francisco to 107 in Imperial County.

Population—During the century following 1860, California's population approximately doubled five times or once each twenty years. This unusual rate of growth is no longer possible not only because of the very size of the base but also because, in absolute terms, net migration and the number of births have declined substantially. However, during the five-year period since 1971, the annual civilian migration has varied from a low during the first year of 26,000 to an average of 177,000 in the last 2 years. From 1970 to 1976 the increase in total population was 1,494,000 or 7.4 percent. On July 1, 1975 California had a total population of 21,198,000 and on the same date in 1976 the total population was 21,520,000, up 1.5 percent since mid-1975.

Labor force and employment—California's civilian labor force averaged 9,380,000 during 1975, a gain of 199,000, or 2.2 percent, from 1974. Civilian employment dropped 57,000 due to the recession and unemployment rose to 925,000, or 9.9 percent of the labor force.

Personal income—Personal income of California residents reached $139.3 billion in 1975, 11 percent of total U.S. personal income. Two-thirds of the total was received as wages and salaries. Manufacturing and government are the largest sources of income, accounting for nearly one-half of the total wage and salary disbursements. Following them in importance are the service and trade industries.

Corporate income—Net income of $7.9 billion from California operations was reported by the 165,676 banks and corporations operating in the State during 1973. Manufacturing industries accounted for approximately 44 percent of the total.

Manufacturing—California has the second largest manufacturing complex in the Nation. According to the 1972 Annual Survey of Manufacturers, value added during that year amounted to $31.4 billion. The State's aerospace industry is the largest in the U.S., and claims approximately 21 percent of all defense contracts, in addition to substantial production for the civilian sector.

Agriculture—California continues to be the Nation's leading agricultural producer. Cash receipts received by California farmers during 1975 totaled $8.5 billion. Sales of all crops were an estimated $5.7 billion, and livestock products earned $2.8 billion.

Metropolitan areas—Much of the data in the Abstract are reported for the 17 Standard Metropolitan Statistical Areas (SMSA's) in the State. The table below summarizes the counties in each area. In addition, the map on page IX shows the areas graphically.

Metropolitan area	*County*
Anaheim-Santa Ana-Garden Grove	Orange
Bakersfield	Kern
Fresno	Fresno
Los Angeles-Long Beach	Los Angeles
Modesto	Stanislaus
Oxnard-Simi Valley-Ventura	Ventura
Sacramento	Placer Sacramento and Yolo
Salinas-Seaside-Monterey	Monterey
Riverside-San Bernardino-Ontario	San Bernardino and Riverside
San Diego	San Diego
San Francisco-Oakland	Alameda, Contra Costa, Marin, San Francisco, and San Mateo
San Jose	Santa Clara
Santa Barbara-Santa Maria-Lompoc	Santa Barbara
Santa Cruz	Santa Cruz
Santa Rosa	Sonoma
Stockton	San Joaquin
Vallejo-Fairfield-Napa	Napa and Solano

The metropolitan areas cover 44.8 percent of the State's area, and include nearly 92 percent of the population.

SECTION A

AREA, GEOGRAPHY AND CLIMATE

This section summarizes data relating to the land and water areas of the State, temperature and precipitation. The basic sources of these data are the federal agencies responsible for surveying and mapping the United States and for recording its weather. Information on federal and state parks and monuments is reported by various government agencies.

The introduction to Section G, Resource Industries, also includes a generalized description of precipitation in California during the water year 1974–75.

SECTION B

POPULATION

The tables in this section summarize available data on the population of the State of California, its counties and cities. Comparisons of California's population with the totals for the Pacific Division and the Nation are also shown.

All figures on the total population of California for April 1, 1960, and April 1, 1970, are from publications of the United States Bureau of the Census, and represent decennial census counts. All estimates of the civilian population and estimates of the total population for the years after 1960 were prepared by the Department of Finance and are based on the analysis of components of population change summarized in Table B-2. Data used in the preparation of these estimates have been obtained from the Vital Statistics Section, Department of Health; the Bureau of School Apportionments and Reports, Department of Education; the State Selective Service System; the Immigration and Naturalization Service; the United States Department of Defense; the Department of Motor Vehicles; and the United States Bureau of the Census. Corrections made by the Bureau to the populations of California counties are reflected in Table B-5.

The Department of Finance publishes annual reports on the State's population, presenting additional material which includes current estimates of the State and county populations.

Occasional reports of California's population composition and population projections are published as data become available.

SECTION C

LABOR FORCE AND EMPLOYMENT

This section presents statistics relating to the civilian labor force of California, including employment, unemployment, hours of work, earnings, apprenticeship, work injuries, union membership, and work stoppages. Employment covered under the Unemployment Insurance provisions of the California Unemployment Insurance Code is regularly reported in *California Employment and Payrolls,* published quarterly by the Employment Development Department. Agricultural employment covered *only* for purposes of Disability Insurance is regularly reported in *California Employment and Payrolls in Agricultural Labor,* also published quarterly by the Employment Development Department. Current data on the civilian labor force, civilian employment and unemployment are published monthly in *California Labor Market Bulletin,* issued by the Employment Development Department. The Employment Development Department also publishes monthly data on nonagricultural employment, average hours worked and average earnings in the *California Labor Market Bulletin Statistical Supplement.* The Department of Industrial Relations publishes quarterly statistics on work injuries under workers' compensation in *Work Injuries in California* and a detailed annual summary in *California Work Injuries;* occupational injury and illness incidence rates in the annual *Occupational Injuries and Illnesses Survey;* union membership data biennially in *Union Labor in California;* annual data on work stoppages in *Work Stoppages in California;* and information about collective bargaining practices and other industrial relations data in *California Industrial Relations Reports,* issued once or twice a year.

The procedures used by the Employment Development Department for estimating civilian labor force, employment, and unemployment are supplied by the U.S. Department of Labor in order to bring state and local estimating methods into closer agreement with the procedures used to develop national figures. Estimates of California's labor force are tied to levels indicated for the State by the Current Population Survey (CPS), a national survey of 50,000 households with 5,000 respondents in California. Labor force estimates for the State's six largest Standard Metropolitan Statistical Areas (Los Angeles-Long Beach, San Francisco-Oakland, Anaheim-Santa Ana-Garden Grove, San Diego, San Jose and Riverside-San Bernardino-Ontario) have also been tied to the CPS. Estimates for the remaining areas in the State are not adjusted to the CPS figures, but revisions have been made in the estimating procedures to bring them into closer agreement with concepts used in the national household sample.

The major change in the revised methodology is putting *total civilian employment* data on a residence basis rather than the prior place of work basis and counting workers with more than one job only once. Previous procedures counted the total number of jobs, thus prior employment data was higher because of multiple jobholders. Labor force data was also changed by the fact that the effects of commuting in and out of an SMSA were eliminated.

Labor Force. The labor force represents the sum of civilian employment and unemployment as defined in the following paragraphs.

Civilian employment estimates include all people who did any work for pay or profit during the pay period which includes the 12th of the month, were on a payroll but unable to work during that week because of vacation, illness, trade dispute or taking time off for personal reasons, or worked 15 hours or more without pay in a family-operated enterprise.

Unemployment. Estimates of unemployment are prepared by the California Employment Development Department. A person is reported as unemployed during the survey week if he (or she) did not have a job, but had actively sought work during the last four weeks and was currently available for work. In addition, two groups do not need to engage in specific job-seeking activity to be counted as unemployed. They are: (1) persons waiting to start new jobs within 30 days, and (2) workers waiting to be recalled from layoff. The definition used is comparable with that of the United States Bureau of Labor Statistics in their Current Population Survey. The estimates of unemployment represent the number unemployed during the week which includes the 12th of the month.

Unemployment rate. The unemployment rate represents the number of unemployed as a percent of the civilian labor force, i.e., the sum of the employed and the unemployed. The seasonally adjusted unemployment rate eliminates the influence of regularly recurring seasonal fluctuations which can be ascribed to weather, crop-growing cycles, holidays, vacations, regular industry model changeover periods, and the like, and, therefore, more clearly shows the underlying basic trend of unemployment.

Nonagricultural wage and salary employment. The statistics of nonagricultural wage and salary employment are prepared by the Employment Data and Research Division of the Employment Development Department in cooperation with the United States Bureau of Labor Statistics, and are comparable with national estimates prepared by the United States Bureau of Labor Statistics and with State and area estimates prepared by other states. Excluded are domestic workers, employers, own-account workers, and unpaid family workers as well as agricultural workers. Government employment refers to civilian employees only.

The estimates cover all full- and part-time wage and salary workers (administrative, supervisory, sales, technical, office personnel, and production workers) who worked during, or received pay for, any part of the pay period which includes the 12th of the month. Persons on an establishment payroll who are on paid holidays, paid sick leave, or paid vacations, or who work during a part of a specified pay period

are considered employed. Persons on the payroll of more than one establishment during the pay period are counted each time reported. On the other hand, persons who are laid off or are on leave without pay, who are on strike for the entire pay period, or who are hired but do not report to work during the pay period are not considered employed. Data for federal defense establishments generally refer to persons who worked on, or received pay for, the last day of the month; for federal nondefense establishments and state and local government, data relate to persons who received pay for any part of the pay period which includes the 12th of the month.

Agricultural employment. Estimates of employment in agriculture—including farmers, wage and salary workers, unpaid family workers, and foreign contract workers—are prepared by the California Employment Development Department.

Earnings and hours. The Employment Data and Research Division of the Employment Development Department compiles statistics of earnings and hours in manufacturing and selected nonmanufacturing industry groups in California as a whole and in sixteen major metropolitan areas of the State. These statistics of average weekly earnings, hourly earnings, and hours per week are derived from employment, payroll, and hours information reported by a representative sample of establishments in each industry group.

The averages are based upon data for full- and part-time workers who worked during or received pay for any part of the reported pay period in a given month (usually the week which includes the 12th of the month). Included in average earnings are overtime pay and premium wages for late shift work. Therefore, these data are not wage rates but are averages of gross earnings.

Work injuries. The statistics on disabling work injuries under workers' compensation are based upon reports of on-the-job injuries which are filed with the Division of Labor Statistics and Research in compliance with the provisions of the California Labor Code. Not covered by the California Workers' Compensation Act are maritime workers, federal employees, and railroad workers in interstate commerce.

The number of fatal work injuries includes (1) deaths for which findings and award decisions are issued by the Workers' Compensation Appeals Board; (2) deaths for which liability is accepted by the insurance carrier or self-insurer without Appeals Board determinations; (3) deaths for which compromise and release agreements are approved by the Appeals Board in which the sole issue is dependency; and (4) deaths for which the amount of compromise settlement either equals or exceeds the commuted value of a findings and award. All other deaths for which compromise and release settlements are approved are excluded from the work fatality statistics.

The occupational injury and illness incidence rates are based upon the results of the annual *Occupational Injuries and Illnesses Survey* conducted by the Division of Labor Statistics and Research in cooperation with the U. S. Bureau of Labor Statistics under provisions of the Federal Occupational Safety and Health Act of 1970. Figures on occupational injuries and illnesses are collected from a scientifically selected sample of the State's employers.

The statistics of insured payroll and workers' compensation benefits are compiled by the California Inspection Rating Bureau, and are on a policy-year basis. The figures do not include the experience of self-insured private and government employers.

The statistics of payrolls and compensation benefits incurred by private self-insurers are derived from annual reports submitted to the Manager, Self-Insurance Plans, Department of Industrial Relations.

Union membership. California union membership figures are collected by the Division of Labor Statistics and Research by means of a biennial Organized Labor Questionnaire (membership figures were collected annually through 1971).

All unions affiliated with the AFL-CIO or predecessor organizations are included in the membership survey. Unions not affiliated with the AFL-CIO are included if they are known to have written collective bargaining agreements with two or more different employers. Also included are unaffiliated unions with a written collective bargaining agreement with a single employer if the contract covers the employer's operations in more than one location in California and if the union has 1,000 or more members. Unions of government workers, which do not usually execute written collective bargaining agreements, are included if affiliated with the AFL-CIO. An unaffiliated union of government employees is included only if it has members in other states as well as in California.

Work stoppages. The statistics of work stoppages in California are collected by the United States Bureau of Labor Statistics.

Included are all known strikes and lockouts involving as few as six workers and lasting the equivalent of a full shift or longer. For statistical purposes a strike is defined as a temporary stoppage of work by a group of employees to express a grievance or to enforce a demand; a lockout is a temporary withholding of work from a group of employees by an employer (or group of employers) in order to induce them to accept the employer's terms. Each concerted action is counted as one stoppage, irrespective of the number of unions, employers, or establishments.

The number of *workers involved* includes all employees in establishments directly involved in a stoppage who are idle for a full shift or longer. Employees in other establishments who are unable to work because of material or service shortages, or for other reasons indirectly connected with the stoppage, are not counted among workers involved. The same worker can be counted more than once in the annual total if he is involved in more than one stoppage during the year.

The number *of man-days idle* is obtained by multiplying the number of workers involved in a stoppage by the number of days or shifts they would normally have worked had there been no stoppage. Allowances are made for fluctuations in the number of workers involved during the period of the stoppage.

[a] This table contains labor force, employment and unemployment data prepared using revised methods prescribed by the U.S. Department of Labor in order to bring state and local estimating methods into closer agreement with national figures. Data from 1970–75 are not comparable with prior years.
[b] Includes wage and salary workers, employers, own-account workers, unpaid family workers and workers directly involved in work stoppages.
[c] Excludes the potential or latent supply of workers not active in the labor market.

[a] Employers not engaged in an exempt activity, who have one or more persons in their employ, and pay wages in excess of $100 during a calendar quarter are subject to the Code. Exempt employment is comprised of interstate railroad employment; self-employed; some Federal, State, and local government employment; domestic services in private homes; persons in the employ of certain nonprofit charitable, education, or religious organizations; persons in the employ of a son, daughter, or spouse; children under 21 employed by a parent; and certain other small groups of workers. Workers in exempt employment may be insured under provisions of the Code if the employer becomes a subject employer through elective coverage.

[b] Omitted to avoid disclosure of confidential information.

AVERAGE GROSS, NET SPENDABLE, AND "REAL" NET SPENDABLE WEEKLY EARNINGS OF PRODUCTION WORKERS IN MANUFACTURING, CALIFORNIA, AND LOS ANGELES-LONG BEACH, SAN FRANCISCO-OAKLAND AND SAN DIEGO METROPOLITAN AREAS, 1975 [a]

(Note: Data in this table update the series shown in Table C-17 in the 1975 *California Statistical Abstract.*)

	California	Los Angeles-Long Beach	San Francisco-Oakland	San Diego
Gross average weekly earnings[b]	$205.80	$194.44	$241.96	$195.97
Net spendable earnings[c] (current dollars)				
Worker with 3 dependents	174.20	166.01	200.60	167.11
Worker with no dependents	154.94	147.29	178.75	148.33
"Real" net spendable earnings[d] (1967 dollars)				
Worker with 3 dependents	109.97	105.34	126.08	103.92
Worker with no dependents	97.82	93.46	112.35	92.25

[a] Real net spendable earnings have been converted to a 1967 base.
[b] Based upon data for full-time and part-time production and related workers. Overtime pay and premium wages for lateshift work are included.
[c] After Federal and State income taxes and Federal Social Security and State disability insurance deduction.
[d] Net spendable earnings adjusted for changes in the Consumer Price Index, compiled by the U.S Bureau of Labor Statistics for Los Angeles-Long Beach, San Francisco-Oakland, and San Diego. The index for California is compiled by the California Department of Industrial Relations as a weighted average of the indexes for these three areas.

TABLE C-26

RECORDABLE OCCUPATIONAL INJURY AND ILLNESS INCIDENCE RATES IN THE PRIVATE SECTOR, BY INDUSTRY, CALIFORNIA, 1974

(Note: Data in this table update the series shown in Table C-26 in the 1975 *California Statistical Abstract.*)

Industry	Incidence rates per 100 full-time workers[a]		
	Total recordable cases[b]	Lost workday cases	Nonfatal cases without lost workdays
Private sector[c]	10.9	4.1	6.8
Agriculture, forestry and fisheries	12.1	5.2	6.9
Mining	13.4	6.8	6.5
Contract construction	21.2	8.1	13.0

Wholesale and retail trade	10.3	3.6	6.7
Finance, insurance and real estate	2.8	0.9	1.9
Services	6.9	2.5	4.4

[a] The incidence rates represent the number of injuries and/or illnesses per 100 full-time employees and were calculated as: N/EH × 200,000 where
N = number of injuries and/or illnesses
EH = total hours worked by all employees during calendar 1974
200,000 = base for 100 full-time equivalent workers (working 40 hours per week, 50 weeks per year)
[b] Includes fatalities. Because of rounding, the difference between the total and the sum of the rates for lost workday cases and nonfatal cases without lost workdays may not reflect the fatality rate.
[c] Excludes railroads (SIC 401).

SECTION D

INCOME AND COST-OF-LIVING

This section presents data on business and personal income and the consumer price index.

Business Income

Tables D-2 and D-3 are compiled from corporate income data reported on returns filed with the Franchise Tax Board.

Corporations doing business in California and those having income from California sources but not technically doing business here are subject to the Bank and Corporation Law. Chapter 2 of the law imposes the bank and corporation franchise tax and Chapter 3 the corporation income tax.

The bank and corporation franchise tax is imposed for the privilege of doing business in California and is derived by the amount of net income earned in or allocated to the State in the preceding fiscal or calendar year. A corporation conducting a unitary business both within and without the State applies an allocation factor to its income in order to determine the amount subject to state taxation. The standard allocation formula is the arithmetic average of three factors—the ratio of California sales to total sales, the ratio of California payrolls to total payrolls, and the ratio of California property to total property. For the period 1935–1958, the minimum franchise tax was $25 a year. For the period 1959–1971, the minimum tax, with limited exceptions, was increased to $100. For 1972, and subsequent years, the minimum tax was increased to $200 per year. Banks are exempt from paying the minimum tax.

The corporation income tax applies to corporations that derive income from California sources but do not engage in intrastate business in California. They are subject to the basic tax rate, but there is no minimum tax. Data for these corporations have been omitted from Tables D-2 and D-3.

Personal Income

Estimates of personal income received by residents of each state are prepared annually by the Regional Economics Information System, Bureau of Economic Analysis, in the United States Department of Commerce. Data are available, by years and types of income, back to 1929 in *Personal Income By States.* Totals and details for the most recent years are reported in the August issue of the *Survey of Current Business.* Quarterly estimates of personal income in California, at annual rates, comparable to the United States Department of Commerce series, are prepared by the State Department of Finance. Copies of this information are available upon request.

An understanding of the conceptual basis of income estimates is essential to the use of these data and it is hoped that users interested in sources of basic information, estimating techniques, definitions, and limitations of these data will consult the Department of Commerce reports mentioned above. Particular note should be taken of the facts that income (1) represents receipts before payment of income taxes and certain non-tax charges, and (2) includes non-monetary income, such as imputed net rental values of owner-occupied homes and payments in kind as well as in cash. As defined, residents include individuals, nonprofit institutions, private trusts, and private pension, health and welfare funds. Nonprofit institutions include religious organizations, clubs, labor organizations, nonprofit schools and hospitals, charitable, welfare, and other private non-profit agencies furnishing services to individuals.

Briefly stated, the following are encompassed in the six categories of income shown here:

Wage and salary disbursements. Monetary remuneration of employees, including commissions, tips, bonuses, etc., and payments in kind.

Other labor income. Employer contributions under private pension, health, welfare and group insurance plans, compensation for injuries, pay of military reservists, directors' fees, etc.

Proprietors' income. Net business earnings of owners of unincorporated enterprises, including farmers and such professional practitioners as doctors, dentists, and lawyers.

Property income. Rental income of persons including royalties on patents, copyrights, and rights to natural resources and imputed net rents), personal interest incomes (including certain imputations), and cash dividends.

Transfer payments. Receipts from government and business for which no service is rendered currently: pensions, unemployment benefits, disability benefits, medicare benefits, direct relief, bad debts absorbed by business establishments, corporate gifts to private nonprofit institutions, etc.

Personal contributions for social insurance. Employee contributions for old age and survivors insurance, unemployment insurance, medicare and public employee retirement systems. Includes similar contributions for such purposes by self-employed individuals. Personal contributions for social insurance are deducted in estimating personal income, since wage and salary disbursements are reported including amounts withheld by employers for this purpose.

The source report shows total and per capita incomes by types and major sources in greater detail than is shown in this *Abstract,* industrial sources of personal income, total and per capita disposable income (after direct personal taxes and certain nontax

payments) and ratios which cannot be reproduced here for reasons of space.

Personal income tax data. Tables D-1 and D-4 represent 1973 income year data, which have been derived from information appearing on personal income tax returns filed in 1974. Personal income tax returns are required of single persons with gross incomes of $7,000 or more or adjusted gross incomes of $3.250 or more and of married persons with gross incomes of $7,000 or more or adjusted gross incomes of $6,500 or more. These filing requirements are for 1968 and subsequent income years. These requirements have been changed periodically.

Personal income tax tables are classified by adjusted gross income class intervals. Adjusted gross income includes salaries and wages (less certain unreimbursed expenses incurred in connection with employment), dividends, interest, annuities, a percentage of net gains or net losses from the sale or exchange of capital assets, gains or losses from the sale or exchange of property other than capital assets, rents and royalties less expenses attributable thereto, gross receipts from business less costs of goods sold and business expenses, and distributive shares of partnership gross income, alimony and separate maintenance payments, pensions, income from life insurance and endowment contracts, income from discharge of indebtedness, income in respect to a decedent, and income from interest in an estate or trust.

Sampling techniques have been used to derive most of the data appearing in the tables presenting the number of personal income tax returns and the amount of adjusted gross income.

Much of the personal income is received by persons who had insufficient amounts of gross income and net income to necessitate their filing state returns or is exempt from state taxation (e.g., dividends on veterans' government insurance, federal and state social security benefits, railroad retirement benefits, workmen's compensation for personal injuries or sickness, interest on federal bonds, etc.). Conversely, there are items of taxable income which are not included in the personal income concept such as gains from sales of assets and alimony. Hence, the data reported on California personal income tax returns are not strictly comparable to those estimates of total personal income reported by the Department of Commerce.

Prices

Tables D-9 and D-10 present the Consumer Price Index for the Los Angeles-Long Beach Metropolitan Area (Los Angeles and Orange counties), the San Francisco-Oakland Metropolitan Area (Alameda, Contra Costa, Marin, San Francisco, San Mateo and Solano counties), the San Diego Metropolitan Area (San Diego County), California, and the United States.

The Index measures the average change in prices of goods and services usually bought by urban wage earners and clerical workers, both families and single persons living alone.

The indexes for Los Angeles-Long Beach, San Francisco-Oakland, San Diego and the United States are compiled by the United States Bureau of Labor Statistics.

Current figures for Pacific Coast areas are published regularly by the Regional Office, United States Bureau of Labor Statistics, San Francisco. The Index for California has been computed by the California Department of Industrial Relations, Division of Labor Statistics and Research, as the weighted average of the Los Angeles-Long Beach, San Francisco-Oakland and San Diego indexes.

Comparisons of indexes for individual areas show only that prices in one location changed more or less than in another. These indexes cannot be used to measure differences in price levels or in living costs between areas.

SECTION E

HEALTH AND WELFARE

Compiled under this broad heading are tables relating to vital statistics and other health; mental hygiene; and social insurance.

Vital Statistics and Other Health Data

This section presents selected statistics relating to health in California, prepared by the State Department of Health.

The sources of data are registration and reporting systems established by law, voluntary reporting systems established with local health agencies, and surveys and special studies conducted or sponsored by the Department. Data from a few of these sources are included.

In interpreting statistics on births, deaths, marriages, divorces and annulments, certain limitations must be recognized. Crude rates for vital events are influenced by age and sex distributions within the populations. Also, the comparability of cause of death data is affected by increasing medical knowledge, changes in classifying disease categories, and changes in international rules for selecting the underlying cause of death.

Data on selected notifiable diseases are obtained from local health authorities. Notification to the local health authority that a case of communicable disease exists within the particular jurisdiction is the first step toward control. These morbidity data are limited by the incompleteness of reporting, the changes made in specific diseases which shall be reported, and by the nature of the incidence of certain diseases in cyclical patterns.

The Department of Health licenses hospitals, nursing homes and related health facilities to insure that standards of patient care are met.

In addition to the sources of the above data, some other sources are described from which data can be obtained on request.

The Environmental Health Services Program in the State Department of Health compiles statistical data through its various regulatory, licensing, inspectional and standard setting activities. Data may be available in the specific areas of Food and Drug, Radiological Health, Water Sanitation, Vector Control and Occupational Health.

The California Tumor Registry collects, evaluates and disseminates information relating to cancer incidence and survival. Data relating to anatomic site, age, sex, race, stage of disease and treatment are used for medical education plus clinical and epidemiological studies. The Registry receives abstracts from 95 hospitals reporting about 32,000 cases per year (about half of the state's total) and has a total of more than 450,000 cases on file.

The Maternal and Child Health Branch collects data to develop and report health indices such as maternal mortality, infant mortality, prematurity, fertility, illegitimacy and abortion rates and family planning. Emphasis is on the identification of high-risk populations and the development and promotion of programs for the detection of conditions for which preventive and therapeutic measures exist.

Laboratory Services provide leadership in the development of laboratory services, standards and applied research to support Department goals, and administer and coordinate the work of all laboratories serving departmental programs.

Most detailed statistical information is published annually in Vital Statistics in California and other series. For definitions used in interpreting statistics relating to vital events, see the *California Statistical Abstract 1970*, Section E, p. 107.

Rehabilitation of the Disabled

This section presents selected statistics on the rehabilitation of disabled persons in California, prepared by the State Department of Rehabilitation.

The primary purpose of the Department of Rehabilitation is to rehabilitate and place into suitable employment the largest possible number of disabled persons. To carry out the rehabilitation program, the Department has facilities and programs throughout the state, which provide a variety of counseling, medical, training, placement and follow-up services. The Department has a number of other objectives, including the support of public and private non-profit rehabilitation facilities which provide vocational evaluation and training for disabled persons; the removal of mobility barriers to the disabled persons; and to provide special training to the blind in independent living skills and in the operation of vending facilities.

The disabled persons received rehabilitation services generally financed by 80 percent Federal funds and 20 percent State matching funds. The beneficiaries of Social Security Disability Insurance and recipients of Supplemental Security Income payments are financed by 100 percent Federal funds. Special cooperative agreements with other state and community agencies are aimed at providing rehabilitation services to particular target groups.

During Fiscal Year 1974–75 the Department carded 110,638 new referrals, formulated 34,294 new plans and rehabilitated 15,537 disabled persons. Included in the rehabilitations were 1,082 beneficiaries of Social Security Disability Insurance, a total of 5,140 public assistance recipients of which 941 were recipients of Supplemental Security Income payments. Re-

4—89572

habilitation of disabled persons represent considerable government savings in Welfare, Medi-Cal and Social Security costs as well as increased Federal, State and Sales Tax revenues from the earnings of rehabilitated clients.

The Federal Rehabilitation Act of 1973 contains a mandate that the most severe disabled persons be given first priority for service. The Department placed more emphasis on serving the severely disabled person in Fiscal Year 1974–75, and even more emphasis in the coming years.

Data in this section includes selected characteristics of the clients rehabilitated; type of disabilities; caseload by county of referral; economic and demographic characteristics of rehabilitated clients; type of public assistance; and benefits and costs for rehabilitated clients.

Disability. The Department provided vocational rehabilitation services to all types of disabilities. The 15,537 clients rehabilitated during Fiscal Year 1974–75 were represented by the following major disabilities: legally blind 3%, other visual 3%, deaf 3%, other hearing 2%, physical disabilities 45%, alcoholism 7%, drug addiction 4%, character or personality disorders 10%, mental retardation 8%, and psychoses or neuroses 15%.

The physical disability category, the largest group, includes individuals who have functional limitations as a result of birth defects, injury or illness. Among this group are people with orthopedic impairments, amputations, disorders of the nervous system, cardiac and circulatory conditions.

Cooperative Program. The Department has jointly funded cooperative programs with some school systems, Community Mental Health agencies, the Office of Alcoholic Program Management, the Departments of Youth Authority and Corrections, City of Long Beach, and Rancho Los Amigos Hospital to provide vocational rehabilitation service to certain target populations. Cooperative programs enable the Department to initiate vocational rehabilitation services during the disabled persons' school, incarceration, parole, or treatment.

Advocacy for the Disabled. The Department's advocacy roles are directed at the removal of architectural and transportation barriers and discrimination in employment based on disabilities. To this end, the Department actively engaged in the movement to develop and enforce legislation requiring that the public buildings be accessible to the physically disabled; renovation of existing buildings to provide ramps, elevators and restroom facilities which can be used by all physically disabled persons; and prohibiting discrimination in employment against physically disabled employees or applicants for employment based solely on their disabilities. In addition the Department provides funds for the establishment or expansion of workshops and rehabilitation facilities.

Business Enterprise Program. The Department through the Business Enterprise Program provides comprehensive training and supervision which enable blind persons to support themselves in the operation of vending stands, snack bars and cafeterias in public and private buildings. The Department develops new locations for vending or food service operation and provides general business services. There were 319 business locations on June 30, 1975, with a gross annual income of $18,170,660. The program provides, beside the 319 blind operators, employment for 751 persons; of whom 94 were disabled.

Social Insurance and Welfare

This section presents data relating to State programs providing unemployment and disability insurance, Federal programs administered in California to provide unemployment compensation to veterans and former federal employees and Old-Age, Survivors, and Disability Insurance benefits; federal, state and county programs assisting the aged, the blind, the disabled, and needy children, providing medical care for public assistance recipients and medical assistance for the needy; county programs of general relief; and the state, county and private agency program providing adoption services.

There are several principal sources for these data. Current statistics relative to operations are available in the monthly report to the Governor prepared by the Employment Development Department and in monthly reports prepared by the Department of Benefit Payments (formerly, Department of Social Welfare). Data on public assistance expenditures and recipients are regularly published in Public Welfare in California, issued monthly by the Department of Benefit Payments. Data on medical care recipients and expenditures are published quarterly by the Department of Health in the California Medical Assistance Program, Services and Expenditures Report. Public assistance data are based on reports to the Department of Benefit Payments by the Social Security Administration and county welfare departments. Effective January 1, 1974, the federal government (Social Security Administration) assumed responsibility for the administration of the Supplemental Security Income/State Supplemental Program (SSI/SSP), which integrated and replaced the Old-Age Security (OAS), Aid to the Blind (AB), and Aid to the Permanently and Totally Disabled (ATD) programs. Data for the California Medical Assistance Program are based on claims paid by the fiscal intermediaries and data received from the Department of Health. Data on adoption services are based on reports to the Department of Health by the Department's field staff, and by county welfare departments and private adoption agencies. Effective July 1, 1973, the responsibility of the Adoption Program was transferred from the Department of Benefit Payments to the Department of Health.

Employment Security. Unemployment insurance and disability insurance activities are reported here from 1950 on. Legislation has modified the coverage, benefits, and services under these programs from time to time, and many uses of the data will require reference to the statutory changes. A detailed descrip-

tion of all changes which substantially affect the figures given here has been published by the Employment Development Department under the title, *Summary of Major Changes in Program of Department of Employment, 1935–1968.*

Old-Age Security. Statistics under this caption relate to financial assistance provided prior to January 1, 1974, to persons 65 years of age or over who did not have sufficient financial resources to support themselves. Within limitations, recipients could own real property if it provided income and could keep additional real or personal property as a reserve for future needs. In general, the ceiling on income producing real property was $5,000 assessed valuation and $1,200 net value on real and personal property held as a reserve. There was no limitation on the value of any real or personal property used as a home. The recipient must have been a resident of California.

Aid to the Blind. The data relate to financial assistance provided prior to January 1, 1974, for blind persons in need who could not support themselves. Recipients could own real property if it provided some income and could keep additional real or personal property as a reserve for future needs. In general, income-producing property must have produced income reasonably related to its value and the ceiling on real and personal property held as a reserve was $1,500 net value (there was no limitation on the value of any real or personal property used as a home). A recipient with an approved plan for self-support could own additional property for not longer than 36 months if the property furthered his self-support plan. The recipient must have been at least 16 years of age and a resident of California.

Aid to Needy Disabled. Figures under this heading relate to financial assistance and medical care provided prior to January 1, 1974, for needy persons who had a major physical or mental impairment or a combination of both that was likely to continue without substantial improvement throughout their lifetime and which substantially precluded them from engaging in useful occupations within their competence, such as holding a job or homemaking. To be eligible, a person must have been at least 18 years of age and a resident of California. Property qualifications were the same as in Old-Age Security.

Supplemental Security Income/State Supplemental Program (SSI/SSP). This program, for which statistics are not available for this edition of the *Abstract,* provides financial assistance for needy aged, blind or disabled persons following the inception of the SSI/SSP program on January 1, 1974.

To be eligible for SSI/SSP, recipients must first meet age or disability criteria similar to that under the OAS, AB, and ATD programs. In addition, income after exclusions and disregards cannot exceed the state standard payment level.

An individual recipient may own assets up to $1,500; a couple, up to $2,250. Exclusions are allowed for the following: 1) property of a trade or business which is essential to the means of self-support; 2) resources of a blind or disabled person if needed to fulfill an approved plan of self-support; and 3) a car, up to a current retail value of $1,200, household goods, or personal effects up to certain limits. The value of a home is excluded up to a maximum market value of $25,000.

Excess Value Home Program. This program relates to financial assistance to aged, blind or disabled persons who meet all the criteria established for the SSI/SSP program, but whose home is valued at greater than $25,000, (no data are available for this edition of the Abstract). EVH is a 100% state funded program administered through the 58 counties which provides for benefit levels equal to those established for SSI/SSP recipients. The income, resource, and residence requirements for EVH are identical to those of SSI/SSP.

Aid to Potentially Self-supporting Blind. These figures describe financial assistance and medical care for persons who are blind and receiving support payments but are working on a plan for self-support. The program is 100 percent state funded, and benefit levels are the same as for blind recipients under SSI/SSP.

Within limitations, recipients may own real property and keep additional real or personal property for future needs and own additional property if the property will further his self-support plan. Recipients must be at least 16 years of age and residents of California.

Aid to Families with Dependent Children. The data relate to financial assistance for children under 21 years of age who are in need because of the death, continuous absence, incapacity, or unemployment of a parent. (The program was amended, effective February 1, 1964, to include children in need because of unemployment of a parent.) In general, the ceilings on financial resources are $1,600 value of personal property, less certain encumbrances, and $5 000 assessed valuation of real property, less encumbrances of record. The recipient must be a resident of California. Assistance is available for children living in foster homes as well as for children living with their parent(s) or relatives.

Food Stamps. Statistics under this caption relate to financial assistance to low income households to improve their nutrition. Households purchase food stamps which are discounted or free, based on the household's income. The amount of food stamps which a household may purchase is based on family size. To be eligible, households must meet federal (USDA) income and resource standards, be county residents and in most cases, have cooking facilities. Households in which all members are AFDC or federally approved GR recipients are eligible without regard to income or resources.

General Relief. Data on this subject relate to assistance to needy persons not eligible under state subvented assistance programs listed above. It is administered and financed entirely by counties. Eligibility requirements and standards of assistance vary from county to county.

Adoptions. Services provided by this program include studies of the suitability of adoptive homes, suitability of children for adoption, and recommendations to the courts on granting adoption petitions. When a child is placed in an adoptive home by an adoption agency (county or private), it is termed a "relinquishment" adoption; when the child is placed directly by the parent, it is termed an "independent" adoption.

Mental Health

This section presents statistics on the major programs supported either directly or indirectly by the State of California for the care and treatment of persons with mental, emotional, and developmental disorders. Some of these programs are maintained and administered by the State Department of Health; other community-oriented programs are locally administered but receive most of their financial support from the State.

As of June 30, 1976, the State Department of Health maintained 11 hospitals statewide—two entirely for the mentally disabled, five that were totally for the developmentally disabled, and four that had programs for both categories of mental patients.

More detailed information on the subjects covered by the following tables and other services in the field of mental health is available in periodic and special reports issued by the Department of Health. Additional statistical data on mental-hygiene facilities and activities outside the Department are available at the community level in periodic reports issued by county health departments, and at the national level in reports issued by the National Clearing House for Mental Health Statistics of the National Institute of Mental Health.

It should be understood that the prevalence of treated mental disorder cannot be measured by the statistics in the following tables, since these data are limited to facilities either operated by or subsidized through the Department. Treatment is also offered by licensed private mental institutions, by locally-operated nonprofit outpatient psychiatric clinics, by general hospitals with psychiatric wards, by hospitals of the United States Veterans Administration, by public school systems with special classes (particularly for children with mild or moderate mental retardation), and by the large number of mental-health specialists in private practice throughout the State.

Hospitals for the mentally disabled. The marked reduction in the mentally ill population of the state hospitals (from a maximum of 37,491 in 1959 to 6,114 on June 30, 1976), made possible the closing of all but six hospitals for such patients, with only two of the six devoted entirely to the mentally disabled. The ratio of hospital population to general population has shown an even greater decrease, from a maximum of 333 per 100,000 state population in 1940 to 28 per 100,000 in 1976.

Many factors have contributed to this trend, which is occurring throughout the nation. These include more ward space per patient, a higher ratio of ward personnel to patients, training programs for ward personnel, the introduction of psychotropic drugs in the 1950's, the availability of federal funds for nursing home care of harmless senile patients, and the marked expansion of state-funded mental health programs at the community level since the early 1960's.

The majority of patients now enter these hospitals voluntarily. This is a change from earlier years when the majority of admissions were on an involuntary basis (primarily by civil commitment for mental illness or for alcoholism). Since July 1, 1969, under provisions of the Lanterman-Petris-Short legislation, patients may no longer be court-committed for indeterminate periods, but enter either voluntarily or if involuntary for a 72-hour evaluation and treatment period. If a patient evaluated is found to be a danger to others or to himself or is gravely disabled and will not voluntarily consent to treatment he may be certified for an additional 14 days of intensive treatment.

The evaluation or screening of patients for hospitalization under this new legislation is the responsibility of the county, and may be done either in a county facility or in a state hospital designated by the county. In like manner, treatment may be given either at a local facility or at a state hospital.

Involuntary patients leave the hospital at the termination of the period specified in the law or earlier if appropriate in the judgment of the medical director of the hospital. Voluntary patients may leave the hospital at any time on notice to the hospital staff. Hospitalization ranges from a few days for the treatment of an acute transitory episode to several years for a patient with severe chronic mental illness. The median length of stay prior to discharge is about two weeks.

Post treatment of ex-patients of state hospitals is now the responsibility of the referring county. Often the county will contract with the Community Services Section, State Department of Health, for this service.

Departures without staff permission by involuntary patients are classified as unauthorized absences. In most instances the patient returns to the hospital; however, the case may be continued under community supervision or closed by discharge.

For many patients the case is closed by direct discharge at the time the patient is released from the hospital. Cases closed by death in the hospital are not included with discharges, but are separately categorized.

The developmentally disabled. A developmentally disabled person is considered eligible for admission only if the parent or guardian, the regional center and the hospital medical staff agree that the hospitalization is best for the patient and for his family. Following the determination of eligibility, admission may be delayed briefly to accommodate the wishes of the patient or family.

The reduction in the mentally disabled hospital population has made it possible to convert several thousand beds to the care of developmentally disabled patients transferred from the four major hospitals for the developmentally disabled. This has reduced these hospitals' population from 11,190 in 1961 to

7,133 patients in 1975. The total hospital population of developmentally disabled is currently 10,050.

Community mental health services. As a result of a two-year legislative interim study on mental illness in California, a new Short-Doyle Act and the Lanterman-Petris-Short Act became law in 1968 and effective July 1, 1969. These two laws were combined into the Community Mental Health Services Act, and changed mental health program requirements for state-subsidized, locally operated mental health programs and also revised California's admission procedures.

The 1969 Short-Doyle Act mandated a county-operated community mental health service in each county with over 100,000 population. Each such program requires the preparation of a county plan specifying the services to be furnished. All mental health care services are to be provided by a single integrated system which is under the general supervision of the county mental health program director. The Act defines ten reimbursable services: inpatient care, outpatient care, partial hospitalization, emergency intervention, diagnosis, rehabilitation, precare and aftercare, training, research, and program evaluation. This plan must be prepared annually, adopted by the county government, and reviewed by the Director of Health. This plan is also the basis of 90 percent reimbursement of costs by the state. The law also establishes a 15-member Citizens Advisory Council to advise and assist the Director of Health, and also provides for the establishment of a 14-member county mental health advisory board in each county.

By 1972, all of California's 58 counties had established mental health programs under the Short-Doyle program, which was originally enacted in 1957. This program of State assistance enables cities and counties to provide timely mental health care within the local community with a minimum of disruption of the day-to-day life of the patient.

During the fiscal year 1973–74 there were more than 30,587 entries to rehabilitation services, 56,583 entries to inpatient services, and 299,257 entries to outpatient and multiple service units. The rapid growth of Short-Doyle services is evidenced by the fact that each of those totals is at least eight times the number for 1962–63.

The Lanterman-Petris-Short Act. This landmark legislation, which became effective July 1, 1969, defines the course of involuntary care and treatment of certain mentally disordered persons. This new law allows the involuntary treatment of chronic alcoholics and those who are gravely disabled or dangerous to themselves or others. It provides for judicial review, at any time, of any person who is held involuntarily. Certain legal and civil rights are also guaranteed to all mental patients. In addition, a conservatorship procedure is specified for patients who are gravely disabled by a mental disorder or impaired as a result of chronic alcoholism.

[a] General Home Relief is that form of General Relief given to persons in their home to meet one or more of the basic subsistence items of food, shelter or clothing. The definition GHR includes residents who are residing in the county. It does not include transients since they are by definition persons who are not residing in the county.
[b] Usual low month.
[c] Usual high month.
[d] General Relief program is that program administered by the County Welfare Department which provides financial assistance to needy persons from county funds only (i.e., financial assistance for which there is no reimbursement from state or federal funds).

SECTION F

EDUCATION

This section summarizes data relating to public and private education in California, both at the elementary and high school levels (kindergarten through grade 12) and at the collegiate levels (community colleges and universities or state colleges). The California State Department of Education has responsibility for accumulating and reporting data on public and private school activities for kindergarten through grade 12; the State Department of Finance has responsibility for higher education statistics.

Enrollment. This figure represents the number of students registered at a specific point in time during the school year, the fourth week of the fall semester.

Average Daily Attendance. This is the figure that describes the attendance according to type of public school districts. Unified school districts consist of all grades K–12, elementary districts generally are grades K–8 and high school districts are grades 9–12 or 7–12 if the district operates a junior high level. As contrasted with enrollment, these figures are averages of attendance over a full fiscal year.

Current Expense of Education. The figures in the table include expenditures made by unified, elementary, and high school districts from (1) local funds, derived chiefly from property taxes, (2) funds apportioned to the districts by the State, based primarily on average daily attendance and assessed valuation of property in the district, and (3) Federal funds. They are known as "general fund" expenditures, but do not include expenditures for food services, community services, facility acquisition and construction or capital outlay. Special funds, such as building funds, bond interest and redemption funds, etc., are also excluded.

State Apportionments. These amounts for elementary (grades K–8) and high school (grades 9–12) education include a basic amount for average daily attendance plus an "equalization" amount based on assessed valuation of each district. County school service fund amounts are for the county superintendents of schools to enable them to provide services to districts and hold special schools and classes for exceptional students. Special apportionments are those made to local educational units for special education of handicapped students, transportation of students, driver education, educational television, special reading programs, etc.

Certificated Personnel. These figures are the total of full-time certificated personnel in public, elementary and high school levels (including unified districts), exclusive of substitute or other part-time teachers. Non-teaching personnel (who are also certificated) are such staff members as counselors, librarians, psychologists, nurses, deans and other administrators.

Revenues for Public School Support. These figures indicate the total revenues available for public school support in grades K–12 for the fiscal year and the sources and amounts that comprise the total.

SECTION G

RESOURCE INDUSTRIES

This section presents data relating to five of the basic resources of California: water, agriculture, forestry, fishing and mining. The descriptive section below includes a brief summary of the series covered and sources for additional information.

Water

Tables G-1 to G-15 present summary information describing the uses to which land is put in California, the land area receiving water service, and the distribution of the available water supply of the State. Whenever possible, the information is given by hydrologic study areas, which have been outlined in the plate on page X.

California's water supply, including its share of interstate waters, is generally ample to meet the State's present and foreseeable needs. However, meeting these needs requires a large-scale transport of water between the northern and southern parts of the State. In a major effort to implement this transport, the Legislature and the voters of California in 1960 authorized the construction and financing of the California State Water Project. This project will compliment the extensive water development in California by the Federal Government and by local water agencies.

The California State Water Project will provide for the delivery of approximately 4,230,000 acre-feet annually to water service agencies from Plumas County to the Mexican border. Construction on the project commenced in 1957 with funds appropriated by the Legislature from the State Water Fund. The initial facilities are essentially complete. The dedication of the southernmost facility, Perris Dam in Riverside County, was held May 18, 1973.

The great majority of the financing of the California State Water Project was provided for by the authorization of general obligation bonds in the amount of $1.75 billion, of which $1.55 billion have been marketed. In addition, over $384 million in revenue bonds have been sold. Project revenues are anticipated to be fully adequate to repay the reimbursable costs of the project. In 1975 water revenues were over $98 million and power revenues were over $16 million.

Planning studies are currently in progress by the California Department of Water Resources and other water agencies to define additional works necessary to meet water demands beyond the year 1990. The scope of studies has been expanded to place greater emphasis on the emerging concern for social and environmental considerations, and the impact of water resource development and management on the environment. Increased emphasis is also being placed on studies of non-traditional sources of water, such as desalination, use of reclaimed water, and weather modification.

Water Conditions in California, 1974–1975

Considering the State as a whole, the amounts of rain and snow that fell on California from October 1974 through September 1975 were typical of most years. This precipitation was distributed in a characteristic pattern that varied from just below normal in southern California south of the Tehachapi Mountains to slightly above normal in the rest of the State.

Persistent high barometric pressures throughout the State dominated the weather pattern through the customarily wet period, November through January, yielding only about half the precipitation usually expected. By the end of January, the seasonal accumulation was only 65 percent of normal. This drought was finally broken by vigorous cyclonic activity over the Pacific Ocean that brought heavy precipitation to the State during February and March, thus compensating for the deficiency of the previous months.

Storms diminished over most of the State in midspring. May was the driest month of the season, with precipitation measuring only 20 percent of normal. A widespread two-day storm in August showered the Central Valley and drenched the Sierra Nevada. September precipitation fell only in the southern portion of the Sierra Nevada and the Lahontan hydrologic area in eastern California.

The late-season storms in March and April delayed accumulation of the peak snowpack. Most mountain areas did not reach their maximum values until around May 1, about a month later than usual. Snow sampling surveys showed that snow-stored water was about 135 percent of normal for the State on April 1. By May 1, this value had increased to 145 percent.

The April 1 water content of snow in the Sierra Nevada watersheds that drain to the Central Valley ranged from about 90 percent of normal for the Kern River Basin to about 180 percent for the Feather River Basin. These values has risen about 10 to 15 percent by May 1. A similar increase occurred in the watersheds of the Lahontan area. Snowpack water content in the North Coastal area was 170 percent of normal on April 1 and remained unchanged on May 1.

Surface runoff during the 1974–1975 water year was average or higher in most of the State, except for the coastal basins and desert areas of southern California where the values were lower than normal. North and Central Coastal hydrologic area streams had the highest values—125 to 130 percent of normal, while those of the South Coastal area averaged only 80 percent of normal. Flows in the major streams of the Central Valley were generally above average, except for the Kaweah, Tule, and Kern Rivers in the southern San Joaquin Valley, where flows were in the 80 to 95 percent range.

In terms of percent of normal, the runoff from melting snow from April to July for streams flowing into the Central Valley, North Coast, and Lahontan areas appears to have been somewhat higher than the total water year runoff. April-July snowmelt flows ranged from 120 percent of normal in the San Joaquin Valley to 145 percent in the North Coastal area. Sacramento Valley and Lahontan area streams were about 130 percent of normal. The start of snowmelt runoff was delayed about a month by late season storms and cool temperatures, but, by mid-June, flow rates had progressed into a normal pattern.

Although down about 600,000 acre-feet (740.1 cubic hectometres) from last year, statewide reservoir storage at the close of the water year was still 110 percent of normal. This was more than 2 million ac-ft (2,467 hm^3) above the normal level for October 1. Interstate storage projects on the Colorado River were storing 140 percent of normal, 5 percent above the 1973–1974 water year, which was a gain of about 3 million ac-ft (3 700.5 hm^3).

Ground water levels in most areas of California, as measured in the spring of 1975, did not change materially from the 1974 measurement, except in areas which are feeling the effect of a number of years of importation of surface water and where management of the ground water supply, in conjunction with imported supply, is a growing reality, or in areas where extraction is overtaking replenishment. Ground water makes up about 40 percent of the water used annually in California. In some localities, it is the only source of water.

In the Sacramento Valley, average ground water levels rose slightly in Tehama and Shasta Counties, fell slightly in Butte and Glenn Counties, and remained stable in Colusa County. Water levels in the northern part of the Valley generally remained higher than they have been since the early and mid-1960s. Levels in other areas of northern California, including the northeast and north coastal counties, were slightly lower than in the previous spring, except for Scott Valley, where average water levels rose more than three feet (0.9 metre).

Water levels have continued to fall gradually in Sacramento and San Joaquin Counties in the area designated as the Folsom South Service Area. A drop of one foot (0.3 metre) occurred during the past year. A 10-foot (3.0 metre) rise in levels was recorded in northern Santa Clara County, an area that has experienced a continuous rise in levels (a total exceeding 60 feet, or 18 metres) since 1967, reflecting the delivery of State Water Project water since 1962 and the corresponding reduction in pumping from wells. In other parts of the south Sacramento Valley and the San Francisco Bay hydrologic area, levels did not vary much.

In the San Joaquin Valley, ground water levels remained stable, with changes varying from a drop of two feet (0.6 metre) to a rise of two feet (0.6 metre). Exceptions were in the South San Joaquin Municipal Utility District, where levels dropped 11 feet (3.4 metres), and in the Arvin-Edison Water Storage District located just southeast of Bakersfield, which experienced a rise of more than 10 feet (3.0 metres).

Along the central coast, levels fell about one foot (0.3 metre) in the Carmel and Pajaro Valleys (Monterey-Santa Cruz Counties) and rose four feet (1.2 metres) on the east side of the Salinas Valley.

Water levels generally continued to decline in most southern California basins. It is still too early to observe the effects of State Water Project deliveries on the levels in basins receiving this water.

Much information on water resources and utilization is available in the several publications of the Department of Water Resources quoted as sources for many of the tables included in this section. In addition, a large amount of specific information is included in reports of other general and special investigations by the Department. A price list of publications in print is available upon request to the Department of Water Resources.

Agriculture

California, which is the third largest state in the continental United States, with a land area of 100.2 million acres, had 63,000 farms and 36.0 million acres in farmland in 1975. Some 200 crops are recognized in California, including seeds, flowers and ornamentals, with California leading the nation in the production of 46 commercial crop and livestock commodities. California's agriculture is unique in that a wide range of commodities are produced with no one crop dominating the State's agricultural economy.

California farmers and ranchers marketed $8.6 billion of agricultural crop and livestock products during 1975—down slightly from last year's record of $8.7 billion. California's $8.6 billion is the highest in the nation representing 9 percent of the nation's marketings from only 2 percent of the nation's farms.

The value of marketings from cattle and calves in 1975 was the largest of any California product with $1,101 million, followed by milk and cream ($997 million), cotton lint and cottonseed ($566 million), grapes ($479 million), hay ($459 million), and processing tomatoes ($454 million).

California's harvested farm production in 1975 was the largest on record at 51.1 million tons, up 12 percent from the previous high of 45.6 million tons in 1974. The increase in production was consistent over the three commodity groups—field crops, fruit and nuts, and vegetables. Compared to 1974, production increases were significant in wheat, up 60 percent; rice, up 20 percent; sugarbeets, up 43 percent; processing tomatoes, up 24 percent; and barley up 32 percent. Lower production was recorded for dry beans, down 35 percent, and cotton, down 25 percent.

The combined acreage of principal crops in 1975 totaled 9.1 million acres, up 3 percent from the 8.9 million acres harvested in 1974. Significant increases in acreages were in wheat, sugarbeets, barley, and rice. Fruit and nut bearing acreage increased to 1,590,142 acres in 1975 from 1,499,810 in 1974. The largest increases in bearing acreage were grapes, up 46,290 acres, and almonds, up 17,689 acres.

California's livestock industry had a record high level of gross cash receipts. The largest receipt increase for a livestock item was recorded by milk and cream, up $103 million from $894 million in 1974. The market value of cattle and calves decreased 12 percent. There were 5.0 million cattle and calves on Cali-

fornia farms and ranches on January 1, 1976—4 percent less than the previous year. The number of beef cows decreased 8 percent, while dairy cows increased 1 percent.

The average California farm was estimated at 571 acres, and valued at $341,000 including buildings. The average value of California farmlands ranged from $250 per acre for rangeland in the Sacramento Valley, to an average of $5,103 per acre for orchards and groves in Southern California.

Fresno County is the leading county in agriculture in both California and the nation with a gross value of $1,024,853,000. The other nine leading counties in California are: Kern ($744,307,575), Tulare ($714,740,000), Imperial ($500,182,000), San Joaquin ($480,540,712), Riverside ($459,154,000), Monterey ($406,076,650), Stanislaus ($395,419,000), Merced ($394,173 000), and Kings ($370,950,100).

Other Statistics. Agricultural data presented in this section, with the exception of the United States Census data, are official estimates of the California Department of Food and Agriculture. Current estimates are available in greater detail in reports issued by the Bureau of Agricultural Statistics. Data for many agricultural commodities are available for varying numbers of years preceding those shown in the tables.

Forestry

The forestry resources of California are becoming increasingly important in response to unprecedented demands for wood products, water, and outdoor recreation. The State contains 42.4 million acres of forestland, ranking first in the continental United States. These lands provide forest products, water, and recreational opportunities which satisfy most of the internal demands within the State and a significant share of the national requirements. There are approximately 16.8 million acres of commercial forestland in the State. California ranks third in the United States in terms of volume of standing timber (278 billion board feet) behind Oregon and Washington. The forest products industry is one of the most important enterprises of the State and represents a significant share of such activities on a national scale. Water and outdoor recreation derived from forestlands are essential to the economy of the State.

Wood products have become increasingly important as other resources are depleted. The production of wood products is based on a renewable resource. Under proper management, growing, harvesting and processing timber crops involves minimal environmental impact. This contrasts with the production of alternative materials which often require high energy inputs and result in unavoidable environmental degradation and the depletion of nonrenewable resources. Through intensive forest management, a continuing supply of forest products can be assured to meet increasing demands. Important secondary benefits include protection of the environment, conservation of nonrenewable resources, protection of watersheds, and the enhancement of outdoor recreational opportunities.

Approximately 14 percent of the United States lumber production, 6 percent of the softwood plywood production, and a substantial quantity of other wood products are manufactured in California. The State ranks third in plywood manufacture and second in lumber production. In 1974, it was estimated that California ranked first in value of forest products sold and first in the number employed in the timber industry with 88,200 employees. Within California, there are approximately 1,453 timber operators; 176 sawmills; 25 veneer and plywood plants; 18 wood pulp, particle board, and hardboard plants, and many secondary wood using industries, e.g., planing mills, furniture factories, container plants, etc. In 1972, the value added by manufacture of forest products in the lumber and wood products and paper and allied products industries in California totaled 1,129 billion dollars.

More detailed data can be obtained in *California Forest Industries—Prospects for the Future* (Portland, 1970) by Daniel Oswald, published by Pacific Northwest Forest and Range Experiment Station, and *A Century of Lumber Production in California and Nevada* (Berkeley, 1953) published by Pacific Southwest Forest and Range Experiment Station of U.S. Forest Service. See also *Production of California Timber Operators in 1974* (Sacramento, 1976) of the California Division of Forestry and various U.S. Bureau of Census reports cited in the tables.

The Economic Importance of Timber in the United States (Washington, D.C., 1963), published by the U.S. Forest Service, contains estimates of value added and employment for timber-based economic activities. *Economic Development Prospects for the Commercial Forest Resources and Forest Products Industries of California* (Berkeley, 1963), a Report to the State Office of Planning, published by the University of California School of Forestry, details information on the forest resource and related industries including regional breakdowns of ownership, production, and resource data.

Forest Statistics for the United States, by State and Region, 1970 (Washington, D.C., 1972), published by the U.S. Forest Service, lists statistics on California's timber industries.

California Forest Industries—Wood Consumption 1972—James A. Howard (Portland, Oregon 1974) includes detailed information on the primary wood processing plants in California including production and use of residue.

Mining

These tables present summary statistics of the production, use and value of mineral materials in California, compiled by the U.S. Bureau of Mines and the Division of Oil and Gas, California Department of Conservation. Some county figures are available from these agencies, and the Division of Mines and Geology.

The monthly publication, *California Geology* (formerly *Mineral Information Service*), provides information on geology and mineral resources in California, the usefulness of minerals and rocks, mineral discoveries and operations.

In addition, the Division of Mines and Geology issues mineral bulletins, special geologic reports, county mineral reports, and geologic and mineral maps. The most recent edition of *Mineral Resources of California* was released in 1966 as Bulletin 191. It gives informa-

tion on the geologic occurrence, economic development, and utilization of the State's mineral resources; price $2. Statistics of mineral operations in California will also be found in the reports of the U. S. Bureau of Mines and the Census Bureau.

Detailed statistics on petroleum and natural gas production are published by the Division of Oil and Gas in the Annual Report of the State Oil and Gas Supervisor, and the monthly Oil and Gas Production Report, both free.

TABLE G-4

AGGREGATE GROSS CAPACITIES OF RESERVOIRS IN CALIFORNIA,[a] BY HYDROGRAPHIC AREA,[b] JANUARY 1, 1976

(In acre-feet)

(Note: Data in this table update the series shown in Table G-4 in the 1975 *California Statistical Abstract.*)

Hydrographic area	Aggregate capacity[c]
Total	44,110,321
North Coastal[d]	4,326,342
San Francisco Bay[d]	935,510
Central Coastal	1,326,740
South Coastal	2,268,419
Central Valley	32,602,231
Sacramento Basin	18,830,115
San Joaquin-Tulare Lake Basin[e]	13,772,116
Lahontan	1,802,067
Colorado Desert[f]	849,012

[a] All reservoirs in California with gross capacities of 1,000 acre-feet or more. Includes reservoirs constructed by federal and state agencies, as well as those constructed by local agencies, concerns and persons. Excludes capacities of reservoirs to be inundated by new construction.
[b] Hydrographic Areas correspond essentially to Hydrologic Study Areas, except as indicated in footnotes "d" and "e", below. North and South Lahontan combined.
[c] Totals include reservoirs under construction.
[d] Reservoirs of Russian River Basin and Salmon Creek Group (the latter tributary to Bodega and Tomales Bays) included in North Coastal total.
[e] Includes Delta-Central Sierra Hydrologic Study Area.
[f] Includes Parker Reservoir on Colorado River.

EXPLANATORY NOTE: This list of 99 major dams in California includes only those which are over 190 feet high or have reservoirs of at least 100,000 acre-feet capacity There are more than 1.000 dams within the safety jurisdiction of the State, which is exercised over dams which are 25 feet or more high storing more than 15 acre-feet of water, or, which are more than 6 feet high storing at least 50 acre-feet. Federally operated dams, 26 of which are listed here, are exempt from state safety supervision.

The "height" listed is the vertical distance from the crest of the dam to the original streambed at the downstream toe of the dam.

[a] Year of bloom is the earlier of the two years designated.
[b] Total production includes culls canning diversion, and economic abandonment—not used in computing total value.
[c] Price and value estimates for citrus fruit are based on equivalent packinghouse door returns. Price and value estimates for non-citrus fruit and nuts are based on equivalent returns at the processing plant door for "processing" utilization and returns at first delivery point for "fresh market" utilization.

SECTION H

MANUFACTURING

This section presents data on manufacturing industries summarized from the U.S. Census of Manufactures and the annual surveys conducted by the U.S. Bureau of the Census. Detailed information for individual industries and local areas is available in the published reports of the Bureau of the Census.

All employees—Includes all full-time and part-time employees on the payroll of the operating establishment. The all employees number represents the average number of production workers employed for the payroll period ended nearest the 12th of March, May, August, and November plus all other employees for the payroll period ended nearest the 12th of March.

Payroll—Includes salaries, wages, commissions, bonuses, vacation pay, and other remuneration paid during the year to all employees of the establishment. Payroll is reported before deductions for Social Security, income tax, group insurance, union dues, etc.

Production workers—Includes workers engaged in fabricating, processing, assembling, inspection, receiving, storage, handling, packing, warehousing, shipping (but not delivering), maintenance, repair, janitorial, watchman services, product development, auxiliary production for plants' own use (e.g., power plant), record keeping, and other services closely associated with production operations. Supervisory employees above the working foreman level are excluded from this category.

Wages—Payroll paid to production workers.

Value added by manufacture—Derived by subtracting the cost of raw materials, parts and components, supplies, fuels, purchased electricity, goods purchased for resale, and contract work from the value of shipments of manufacturing establishments in each industry and adjusting for the net change in finished goods and work-in-process inventory between the beginning and end of the year plus the value added in merchandising activities of manufacturing establishments.

New capital expenditures—Includes, for all manufacturing plants in operation and under construction: expenditures for new structures and additions (including major alterations, capitalized repairs, and improvements) to the manufacturing plant, whether on contract or by the plant's own work force; new machinery and new equipment; and capitalized repairs and improvements to existing machinery and equipment. Excluded are expenditures for "used" plant and equipment acquired from others, and for land.

Data on manufacturing firms by county and by number of employees are compiled from reports published by the Employment Development Department.

Aerospace

Information on California's largest single manufacturing sector, defense-aerospace, is obtained primarily from reports of the U.S. Department of Defense (DOD), the National Aeronautics and Space Administration (NASA), and the California Department of Industrial Relations. Material from these and other sources has been summarized by the Department of Finance.

DOD prime awards include all procurement actions of $10,000 or more, and include those for research and development (R&D), also shown separately. NASA totals include awards of $10,000 or more for R&D and to educational and nonprofit institutions, and of $25,000 or more for all other contracts.

Prime contract awards are given to the manufacturer who will assume primary responsibility for coordination, testing, production or similar activities related to a project. The primary contractor, in turn, generally sub-contracts to other firms approximately half the initial award. These subcontracts may or may not be made to other firms in the state of the primary contractor. Adequate information is not available by which to determine the overall position of California firms in DOD and NASA primary and subcontracting activities.

[a] The publication of "all industries" totals at the county level is limited to the large industrial counties (those with over 5,000 manufacturing employees) which could be shown without disclosing figures for individual companies and for which a reliable estimate was obtained. The sample for the annual survey of manufactures was not designed to obtain reliable data for smaller counties.

SECTION J

TRANSPORTATION

Statistics relating to the mileage of roads, expenditures to construct and maintain these roads, and traffic and accident data on all freeways and on rural State highways were compiled for publication by the Office of Highway System Planning in conjunction with the Office of Traffic, Department of Transportation.

The accident statistics contained in this report are based upon fatal and injury accidents involving a motor vehicle. The reports from which these statistics are compiled are those required to be reported to the California Highway Patrol under Section 20008 of the Vehicle Code. Accidents involving "property damage only" are not required to be reported and, consequently, do not reflect an accurate total.

SECTION K

PUBLIC UTILITIES

This section presents statistics summarizing the operations of public utilities in California. Tables K-2 and K-4 cover telephones placed by Pacific Telephone and the Independent Telephone Companies. Table K-3 presents typical monthly utility bills in selected California cities. More detailed data on any of the utilities can be obtained from the Public Utilities Commission.

[c] Municipally owned utilities, Federal projects, cooperatives, irrigation districts, etc.
[d] Includes all rural use other than irrigation.
[e] Includes energy for public agencies, street and highway lighting, railroads and street railways, and by electric utilities for plant operation.

Note: Total quantities shown under the "Use" heading differ from those under "Production" for two reasons. In the first place, some of the energy used in California is generated outside the state (and vice versa). Secondly, transmission and distribution losses are not included in use data.

SECTION L

TRADE AND SERVICES

This section presents information on wholesale and retail trade in California as these are reflected in the Census of Business and taxable sales data, and on services as reflected by census data and the licensing activities of the state agencies which examine and license professional and vocational personnel and establishments.

Tables L-2, L-5, and L-13 summarize census data on wholesale trade, retail trade, and selected services in California. Additional information is available from the final census reports for the State, issued by the U.S. Department of Commerce, Bureau of the Census.

Total wholesale trade figures include merchant wholesalers (also shown separately), manufacturers' sales branches, petroleum bulk terminals, merchandise agents and brokers, and assemblers of farm products. Merchant wholesalers include all establishments primarily engaged in buying and selling merchandise on their own account.

Retail trade data cover all items sold through retail outlets or by nonstore retailers. The latter group includes mail-order houses, merchandise vending machine operators, and direct (house-to-house) selling organizations. Retail trade figures from the 1972 Census, therefore, differ substantially from the taxable sales data, which exclude all items not subject to the California sales tax—notably food for home consumption.

Service data include only major activities, which, however, account for most of the persons engaged in the service sector: hotels, motels, and tourist camps; personal services; miscellaneous business services; automobile and miscellaneous repair services; motion pictures; and other amusement and recreation services. These activities are reported essentially in their entirety. Excluded are medical and educational services; museums, art galleries, and botanical and zoological gardens; nonprofit membership organizations; and private households and miscellaneous services.

Taxable sales data. In general, retail sales outlets are classified according to the seller's principal line of business. Certain types of business selling only merchandise not subject to sales tax are not licensed and, consequently, are not represented in the statistics. The principal exclusions are establishments selling only food for home consumption, such as produce markets, meat and seafood markets, poultry stores, dairy stores, bakeries, etc.

The taxable transactions of retail stores may not be the same as their gross receipts because not all of their transactions are subject to sales tax. The principal exemptions from the tax are the sales of (a) food for home consumption, (b) utility service when delivered to consumers through mains, lines, or pipes, (c) animal life used for human consumption, (d) feed, seed, plants, and fertilizers when used for the production of food for humans, (e) newspapers and periodicals, and (f) prescription medicines. Also not included in taxable transactions are service charges, a source of receipts of many retail stores and all service establishments.

The statistics include purchases of equipment, fixtures, supplies, and material from outside of the State on which use taxes are reported and paid by the purchasers.

Taxable sales data which appear in the following tables are also printed in the Taxable Sales in California report published quarterly by the State Board of Equalization. The report presents data by type of business for the 208 largest cities in the state. Data on all other California cities is provided with less detail. Further detail is provided for the state as a whole as well as for the 32 most populous counties. Since 1960 an annual report with a similar format has been issued by the Board.

[a] All kind-of-business classifications are not shown separately; therefore the detail will not add to the total.

[b] Percentage change may be affected by the shifting of some establishments from retail trade to wholesale trade because of classification rule changes in the lumber; paint, glass, and wallpaper; electrical supply; farm equipment and supply; hay, grain, and feed; and plumbing, heating, and air-conditioning kinds of business.

[c] Percent that sales of establishments with payroll represented of total sales of all establishments in the 1967 census.

[d] Includes sales from catalog order desks.

[e] Nonstore retailers are establishments primarily engaged in the retail sale of merchandise by catalog and mail order; by means of automatic vending machines; by house-to-house canvass; or from a truck or wagon.

APPARENT CONSUMPTION[a] OF ALCOHOLIC BEVERAGES IN CALIFORNIA, BY TYPE OF BEVERAGE, 1975

(In thousands of gallons)

(Note: Data in this table update the series shown in Table L-8 in the 1975 *California Statistical Abstract.*)

Type of beverage	1975 apparent consumption
Beer	460,769
Wines:	
Still wines, 14% alcohol or less	62,821
Still wines, over 14% alcohol	11,880
Champagne and sparkling wines	4,255
Total wines	78,956
Distilled spirits	51,772

[a] Except for tax-exempt distributions of beer to the armed forces which have been included in beer distributions, the figures in this table represent taxable distributions and are compiled from the monthly tax returns of the taxpayers. Because the tax liability attaches at the time alcoholic beverages are sold by manufacturers or importers rather than at the time a retail sale is made or when the consumption occurs, the above data are referred to as *apparent* consumption figures rather than as *actual* consumption figures.

SECTION N

PUBLIC FINANCE

Data relating to the financial operation of governmental agencies in California are summarized in this section. The information is arranged according to the level of government, starting with the Federal and running through special districts. In general the purpose is to present figures on revenues, expenditures and debt, with additional details on each of these subjects where these can be readily prepared in summary form. Supplementary information is available in the files and records of the several contributing agencies.

A warning should be given against adding either revenues or expenditures of the several governmental levels and treating the result as the aggregate income or outgo of governments in California. A great deal of money passes from one level to another in the form of subventions and other intergovernmental payments. Consequently there is a substantial duplication in these figures which can be eliminated only after careful examination of the various items involved. Differences among governmental agencies in accounting practices, especially in regard to disbursements from proceeds of bond issues, also will require attention in using these data.

Federal taxation and expenditures. Annual reports of the United States Commissioner of Internal Revenue are the source of statistics on Federal tax collections in California. Collections within a particular state are not an accurate measure of the burden of Federal taxes paid by the people of that state. For example, 60 percent of the cigarette tax is collected in North Carolina and more than 80 percent of the motor vehicle excise tax is paid in Michigan. But the burden of these taxes is carried by cigarette smokers and vehicle users in all states. The ratio of Federal tax collections to the burden of Federal levies varies with changes in the tax structure, economic conditions and other factors.

Complete data on Federal expenditures by states is not available, but payments by the Federal government to state and local governments are reported in *Federal Outlays in California.*

State revenues, expenditures and bonded debt. The summaries here presented are based upon budget classifications of State revenues and expenditures. Additional information may be obtained from the *Annual Report of the State Controller* and the *State Budget.*

Aggregate fiscal year revenues are segregated by general and special funds. For the most part, general fund receipts are derived from broad levies and charges not earmarked for particular purposes, while special fund receipts are dedicated for use in special services. Sales, personal income and corporation taxes are examples of the former; motor vehicle taxes and fees, which must be used for activities related to highways, roads and streets, are the leading special fund levies. Receipts from some revenue sources are apportioned by law between the general fund and certain special funds.

Revenue collections are shown for each of the principal sources, without regard to fund. Amounts represent accruals during the year to the collecting agency. Permit fees required in connection with such levies as the sales and motor vehicle fuel taxes are included with other receipts from these levies.

Expenditure data are summarized in accordance with the three principal sections of the budget: (1) State operations, which include the expense of maintaining the various departments, boards, commissions and offices—including the legislative and judicial branches; (2) capital outlay—representing the cost of acquiring land, constructing and equipping new facilities, highway construction and similar expenditures; and (3) local assistance, which comprises State payments to local governments. Under State accounting practice, disbursements from proceeds of bond issues are treated as expenditures at the time the bonds are redeemed. Hence, initial payments from bond funds are not included in these totals.

Expenditures for the principal functions of government include amounts for all three of the general purposes mentioned above—State operations, capital outlay and local assistance.

The functional classification of State expenditures was revised in 1962 in order to conform this reporting so far as possible to the agency concept of governmental organization. Detailed information regarding the activities and services comprising each function may be obtained from budget summaries.

The State Treasurer and the California Bonding Picture—The State Treasurer has duties and responsibilities set forth both by the Constitution and by statute. Serving as banker for the State, the Treasurer receives all state revenues into the State Treasury and provides for the redemption of all state warrants. A responsibility of the Treasurer includes the determination of the cash needs of the State on a daily basis and for the investment of all temporarily idle funds.

The investment earnings on the funds and accounts invested by the Treasurer were in excess of $218 million during the 1975/76 fiscal year. Interest earned on investments is credited to the general fund and other funds of state government as provided by law.

The trust functions of the State Treasurer's Office provide for the safekeeping and servicing of all state-owned securities and other personal property. On June 30, 1976, securities held for state funds, deposited by banks to secure bank deposits and all

pledges with state agencies and other safekeeping items, totaled just under $14.7 billion.

All state general obligation bonds authorized by the people are prepared, sold, serviced and redeemed by the State Treasurer. Of the $5.6 billion of bonds outstanding on June 30, 1976, approximately 63 percent is represented by self-liquidating bonds serviced by certain earmarked receipts other than general tax sources.

Water Development Program Bonds—A total of $1.550 billion of the $1.75 billion general obligation bonds authorized by the voters in 1960 under the Burns-Porter Act had been sold as of June 30, 1976. The Burns-Porter Act dedicates certain revenues of the project remaining after provision for the expense of operation, maintenance and replacements, to the payment of the principal of and interest on the Water Bonds.

State School Building Aid Bonds—The loans to local school districts remain fairly constant. Since its inception in 1947, some 62,000 classrooms housing 2 million pupils have been provided under this program. By June 30, 1976 a total of $2.140 billion in school building aid bonds had been sold of the $2.390 billion authorized by the electorate.

Veteran's Farm and Home Loan Bonds—This program has been entirely self-supporting since its inception, with the administration costs, bond redemption and interest payments covered by veterans loan repayments. Since 1921 over 250,000 loans have been made to qualified California veterans. As of June 30, 1976, $1.359 billion of the veterans bonds sold remain outstanding.

State Beach, Park, Recreational, and Historical Facilities Bonds—During 1965 the first bonds were offered for sale of the $150 million program to acquire and develop the state's outdoor recreational facilities approved by the people in 1964. As of June 30, 1973, all of the authorized bonds had been sold. The voters, at the June 1974 primary elections, authorized an additional $250 million in bonds for these recreational purposes. As of June 30, 1976, $178.5 million of these bonds remain outstanding.

Recreation and Fish and Wildlife Enhancement Bonds—The electorate passed the bond program authorizing $60 million, of this $54 million is to be used for construction of onshore recreation facilities at units of the State Water Project, and $6 million for fish and wildlife enhancement at units of the State Water Project. As of June 30, 1976, $54.0 million of bonds remain outstanding.

Clean Water Bonds—The voters in November 1970 authorized the issuance of $250 million to assist local agencies in funding construction of necessary wastewater treatment and disposal facilities. In addition, another $300 million was authorized in June 1974. The costs of the facilities are shared jointly by the Federal, State, and local government. A total of $250 million had been sold through June 30, 1976.

Community College Construction Program Bonds—The electorate in 1972 authorized $160 million to finance the construction, site acquisition and development for two year colleges. As of June 30, 1976, $140 million had been sold.

Health Science Facilities Construction Program Bonds—The voters in 1972 authorized $155.9 million to assist in financing construction of health science facilities at the University of California. By June 30, 1976, $55 million had been sold.

TABLE N-11

TANGIBLE PROPERTY TAX LEVIES [a] AND AVERAGE TANGIBLE PROPERTY TAX RATE,[b] BY LEVEL OF GOVERNMENT, 1975–76

(Note: Data in this table update the series shown in Table N-11 in the 1975 *California Statistical Abstract.*)

Level of government	Tax levies (in thousands)	Average tax rate (per $100 of assessed value)
Total[f]	$8,296,752	$11.33
City and County of San Francisco	198,737	6.74
Other counties[c]	2,346,642	3.33
Other cities[d]	864,741	1.75
School districts	4,359,707	5.95
Other districts[e]	526,925	--

[a] Excludes special assessments levied on limited categories of property to finance activities from which such properties derive special benefits. In 1975–76 these assessments totaled approximately $207 million.
[b] Computed by dividing the total taxes levied by each level of government by the net total assessed value of tangible property within its jurisdiction.
[c] County levies for school purposes such as junior college tuition and county-wide school levies are included with school levies.
[d] Computed by dividing city tax levies by the assessed value of tangible property inside cities as shown on county assessment rolls.
[e] The special district tax rate is not shown separately, but it is included in the total rate.
[f] Detail may not add to total because of rounding.

[a] These are the assessed values on which general property taxes were levied in the 1975–76 fiscal year. Excluded are exemptions totaling $11,636,928,000 as follows: homeowners' $6,351,970,000; business inventories $3,094,107,000; and all other $2,190,851,000.

[b] Excludes the following amounts of state reimbursement to local governments for exemptions described in footnote a: homeowners' $743,149,100 and business inventory $351,837,800.

[c] County levies for school purposes such as junior college tuition and countywide school levies are included with school levies.

[d] Excludes special assessments levied on limited categories of property to finance activities from which owners of such properties derive special benefits. Such assessments totaled approximately $207 million.

[e] Computed by dividing total levies by the assessed value and multiplying by 100.

[f] Ratio of assessed value to full value as found by the State Board of Equalization.

[a] Because the State reimburses counties for the loss of revenue from the homeowner's and business inventory exemptions and tax rates are set on assessed values which include the values of these exemptions, they have been included in assessed valuations. In 1975–76 these exemptions amounted to $6,351,970,000 for homeowners' (at $1,750 per exemption) and $3,081,252,000 for business inventory (at 50% of gross assessed values).

SECTION O

LAW ENFORCEMENT

This section presents summary tables showing the number and procedural movement of persons under commitment to the two State correctional agencies, the Departments of Corrections and Youth Authority.

Data relating to the Department of Corrections were compiled starting with 1945, and those for the Youth Authority with 1946, the years in which central statistical controls were established. Figures for years not included here were published in the *California Statistical Abstract* for 1970, 1971, 1972, 1973, 1974, and 1975.

Additional data on crimes committed, persons arrested, and the procedures of criminal justice may be obtained from reports by the Bureau of Criminal Statistics, Department of Justice. *California Prisoners,* published by the California Department of Corrections, describes the characteristics and movement through prison and parole of adult persons convicted of felonies and committed to the Department of Corrections. The Annual *Statistical Reports* published by the California Youth Authority summarize the facts about the referrals to that Department, characteristics of wards first committed, ward population movement and data on parole performance.
